Excerpt from Policy Manual M-2

- Ensure that any statements which you make are, to the best of your knowledge, accurate and based upon current clinical information about the employee. For example, you should not certify that an employee has been unfit to work simply because the employee tells you so.
- Before giving an opinion on an employee's fitness to work, a physician should be sure that the physician has accurate information about the requirements of the employee's job.
- The physician should not state that the employee has been under the physician's care for any time during which the employee was not in fact the physician's patient.
- Physicians should ensure that they have received the employee's consent to provide information to the employer or its insurer.
- Physicians should take care not to disclose more information than is covered by the employee's consent or is required by the employer's request. For example, diagnosis and treatment information is not normally required to questions concerning fitness to work or prognosis for future attendance at work.

While reference in this article has been to forms required by a patient's employer or that employer's insurer, it is plain that the guidelines offered have just as ready application to the other sores of forms which patients ask physicians to complete in order that patients can avail themselves of the benefits to which they may be entitled. No physician is immune from request to complete forms, and all physicians know how repetitive and tedious and time consuming this activity can be. The point is, however, that carelessness in the completion of forms can cause serious medicolegal difficulty for a physician, just as can carelessness in the management of a patient.
